

Security services

Connect security investments to the risks that matter. Build a coordinated defense across identities, devices, data, cloud workloads, and artificial intelligence (AI).

Capabilities

- AI Security and AI Governance for business applications and agents.
- Entra Suite identity governance and risk-based access.
- Zero Trust Network Access, secure web gateway, and phased legacy virtual private network replacement.
- Endpoint security and device management.
- Data protection, threat response, and cloud security posture.

Deliverables

- An exposure inventory and prioritized risk register.
- A control-gap and detection coverage assessment.
- A sequenced remediation roadmap.
- Response runbooks and operational ownership.

Business value

A clearer risk picture, consistent response decisions, and security that supports innovation. Agree on baselines before setting improvement targets.

Start with a security posture assessment.

Bring your critical services, security tooling, and priority concerns. Agree on scope, access, deliverables, and acceptance criteria before implementation.
