

Cloud and AI Platforms

Turn infrastructure, applications, and fragmented data into a foundation for business progress. Connect modernization to security, resilience, and useful intelligence.

Capabilities

- Azure landing zones and governed platform foundations.
- Application and infrastructure modernization.
- Data integration, analytics, quality, and governance.
- Secure artificial intelligence (AI) application architecture and evaluation.
- Reliability, operational ownership, and cost visibility.

Deliverables

- A target-state architecture and design decisions.
- A prioritized modernization backlog.
- A phased implementation and readiness plan.
- An operations and optimization roadmap.

Business value

Less inherited complexity, more trusted data, and clearer operational control. Agree on reliability, quality, and cost measures before implementation.

Start with a cloud and data modernization roadmap.

Bring the application landscape, important data sources, and operational constraints. Prioritize the platform foundation and the first workload it needs to support.
