

Copilot readiness and adoption

Give Microsoft 365 Copilot a focused, protected path into everyday work. Align business use cases, information access, technical prerequisites, and adoption before broad rollout.

Capabilities

- Prioritize role-based use cases and a bounded pilot.
- Review licensing, identity, device, and information readiness.
- Identify oversharing and relevant data-protection gaps.
- Design enablement, support, and feedback processes.
- Evaluate task quality and readiness before expanding.

Deliverables

- A use-case portfolio and readiness assessment.
- A prioritized protection and remediation plan.
- A pilot charter with success and exit criteria.
- An enablement playbook and adoption measurement plan.

Business value

A deliberate adoption decision backed by evidence. Discuss task usefulness, output quality, readiness gaps, and sustained use without promising time or cost savings.

Start with a focused Copilot readiness engagement.

Bring the intended pilot roles, approved knowledge sources, relevant policies, and business owners. Validate supported capabilities and current licensing before implementation.
